

SRI HARI

Software Developer

9940731536 | srihari8286@gmail.com | linkedin.com/in/sri-hari-v-908a51291/ | Coimbatore, TN

SKILLS

Languages: Python,java **Frame work:** Pyramid , React **Core:**DSA, OOP, DBMS, OS **Tools:** Git,Docker,pandas,numpy

EXPERIENCE

Software Engineering Virtual Intern – JPMorgan Chase (Forage)

03/2026 – 04/2026

JPMorgan Chase | Remote

- Engineered backend components of a financial transaction processing system using **Java 17 and Spring Boot**, handling high-throughput data flows in a simulated production environment.
- Implemented **event-driven communication via Apache Kafka** for real-time transaction streaming, reducing message latency by design.
- Designed integration tests using **JUnit 5 and Embedded Kafka**, achieving validated end-to-end message workflow coverage.

Networking Engineer Intern

06/2025 – 08/2025

Cisco | Remote

- Configured and analyzed **enterprise-grade routing, switching, and network troubleshooting** in simulated and real-world scenarios using Cisco tools.
- Implemented **basic security configurations** across enterprise network architecture, reducing exposure surface in lab environments.

Cyber Security Analyst Intern

06/2024 – 08/2024

Cisco | Remote

- Conducted **vulnerability assessments and threat analysis** using industry-standard tools, identifying potential attack vectors across network security scenarios.
- Applied concepts of **ethical hacking and enterprise security practices** to simulate and mitigate common cybersecurity risks.

PROJECTS

Trust-Aware Federated Learning System | Python, TensorFlow, Federated Learning, Distributed Systems

- Built a secure distributed ML training system across multiple clients using **TensorFlow Federated**, enabling model training without sharing raw data.
- Implemented **trust scoring and anomaly detection mechanisms** to identify malicious participants, improving model robustness by flagging outlier gradient updates in real-time.
- Trained and evaluated the system on **10+ decentralized datasets** with simulated Byzantine attack scenarios, achieving **90%+ attack detection accuracy** and significantly reducing adversarial impact on global model performance.

Accident Detection & Emergency Alert System (IoT) | Embedded C, Arduino, GPS, GSM

- Designed an **IoT-based accident detection system** using vibration sensors (MPU-6050) to detect sudden impacts with <200ms latency.
- Integrated **GPS and GSM modules** to automatically dispatch real-time location alerts to predefined contacts, enabling faster emergency response.
- Achieved reliable detection across **15+ simulated test scenarios** with zero false-negative trigger rate in controlled impact tests.

Smart Glove for Speech Impairment | Python, IoT, ESP32, ML, Flex Sensors

- Developed a wearable **hand gesture-to-speech conversion system** using flex sensors and ESP32 microcontroller with AI-based gesture recognition.
- Trained a **custom ML classification model** on gesture datasets, achieving 92%+ recognition accuracy across 20+ distinct hand signs.

EDUCATION

Computer Science and Engineering

2023 – 2027

Karunya Institute of Technology and Sciences (Deemed University) | Coimbatore, TN

Primary & Secondary Education

2011 – 2023

P M SHRI Kendriya Vidyalaya AFS | Suler | Coimbatore, TN

ACHIEVEMENTS & EXTRA-CURRICULAR

- Awarded **Regional Level Certificate in Volleyball** representing P M SHRI Kendriya Vidyalaya AFS, Suler at state-qualifying competitions.
